

Low Carbon Technology Partnerships initiative

Invitation to LCTPi 5 event in San Francisco, 1 June 2016

We are delighted to invite you to attend the fifth global event of the Low Carbon Technology Partnership initiative (LCTPi) led by the World Business Council for Sustainable Development (WBCSD) in San Francisco on Wednesday 1 June 2016

Back to back with the seventh meeting of the Clean Energy Ministerial, CEM7, this is the first major global meeting of the LCTPi in 2016. Building on the exceptional ambition demonstrated in Paris to transition to a low carbon economy, we will focus on how LCTPi is harnessing the power of private sector innovation and collaboration to implement climate action.

The event is primarily targeted to a business audience who would like to learn from companies who are engaged in LCTPi. We are excited about sharing the progress made this year and creating new relationships to help overcome key barriers faster and scale up climate action.

An exceptional set of speakers will kick off our day, including: Jerry Brown, Governor of California (invited); Gina McCarthy, EPA Administrator (invited); Lisa Jackson, VP Environment, Policy and Social Initiatives, Apple (confirmed), Peter Bakker, CEO, WBCSD (confirmed); and Energy Ministers attending CEM7.

To join us and register for this full day event at the Westin St Francis hotel, free of charge, please contact our LCTPi programme manager at helen.baker@wbcسد.org

Overview of the day, which will begin at 08.30:

- Opening plenary with keynote speakers
- Morning parallel sessions

Renewable Integration

Climate Smart Agriculture

Cement

Low carbon transport fuels

- Lunch
- Afternoon parallel sessions

Renewable Finance

Forests and forest products as carbon sinks

Energy Efficiency in Buildings

Low carbon freight

- Closing Plenary

LCTPi and your company's success in the emerging low carbon economy

With a solid framework and clear agenda, LCTPi is a unique, action-oriented program that brings together companies and partners to accelerate the development of low-carbon technology solutions to stay below the 2°C ceiling. It is led by WBCSD in partnership with the International Energy Agency (IEA) and Sustainable Development Solutions Network (SDSN).

LCTPi has gathered over 150 global businesses with 70 partners to work collaboratively on the climate challenge. Companies who are engaged in LCTPi include:

A PwC analysis of the potential impact of the LCTPi as a whole highlights that if the ambitions of the LCTPi are met it could cut emissions by around 25% from business as usual and get society 65% of the way to a 2°C emissions pathway. In addition it could channel \$5-10 trillion of investment toward low carbon sectors of the economy and support 20-45 million person-years of employment.

By COP21, each working group agreed a statement of ambition for the sector and developed near-term action plans to overcome key barriers. In 2016, the groups will focus on implementation and at COP22, in Marrakesh, they will present their progress and key outcomes.

By facilitating the global scale up of solutions through concrete action, LCTPi will contribute to countries' nationally determined contributions (NDCs). The initiative will continue to drive company engagement and deliver strong results so that countries are ready to increase ambition when they meet in 2018 to upgrade their NDCs.

Engage in LCTPi now

Join LCTPi and capitalize on the economic opportunities that innovative solutions and new partnerships will bring.

To join a **working group** please contact the relevant group leader:
